("Etherstack" or the "Company")

American Samoa Police Radio Network Commissioned

Etherstack plc is pleased to announce the successful commissioning of the new digital radio network for the American Samoa Department of Public Safety by its distributor Durham Communications Inc of Arizona, USA.

The new digital radio network is based on Etherstack's latest digital P25 radio network technology and represents the fourth international police force using Etherstack's digital radio solution, following successful deployments in the US, Canada and Russia.

The system is now in use by the islands' police force, homeland security and emergency services.

Etherstack's unique technology allows for the graceful transition of the islands legacy analogue radios to the new secure digital radio network standard preferred by the US government known as APCO P25. The new digital radio system designed by Etherstack allows users of the new secure digitally encrypted handsets to communicate with users of the older analogue radio handsets during the transition to digital secure communications.

"Etherstack's ability to provide a seamless transition from analogue to digital within the user population is a big plus to public and private network operators, allowing them to retain the investment in their existing radio equipment as they phase out older equipment ", said Etherstack's CEO, David Deacon. "Besides cost savings, this is a big benefit for users in the ease of migration from one technology to another. We are proud to be assisting in improved public safety communications in American Samoa."

More details can be found on Etherstack's website at www.etherstack.com

About Etherstack plc (ASX:ESK):

Etherstack is a wireless technology company specialising in licensing mission critical radio technologies to equipment manufacturers and network operators around the globe. With a particular focus in the public safety, defence, utilities, transportation and resource sectors, Etherstack's technology can be found in radio communications equipment used in the most demanding situations. The company has R&D facilities in London, Sydney, New York, Yokohama, Barcelona, Berlin and Singapore.
